

NiSi[®]
BEYOND IMAGINATION

▶ CLOSE UP LENS KIT NC

Includes:

- 1x Close up lens (77mm)
- 1x 72-77mm adapter ring
- 1x 67-77mm adapter ring
- 1x Free Pouch

► *Features*

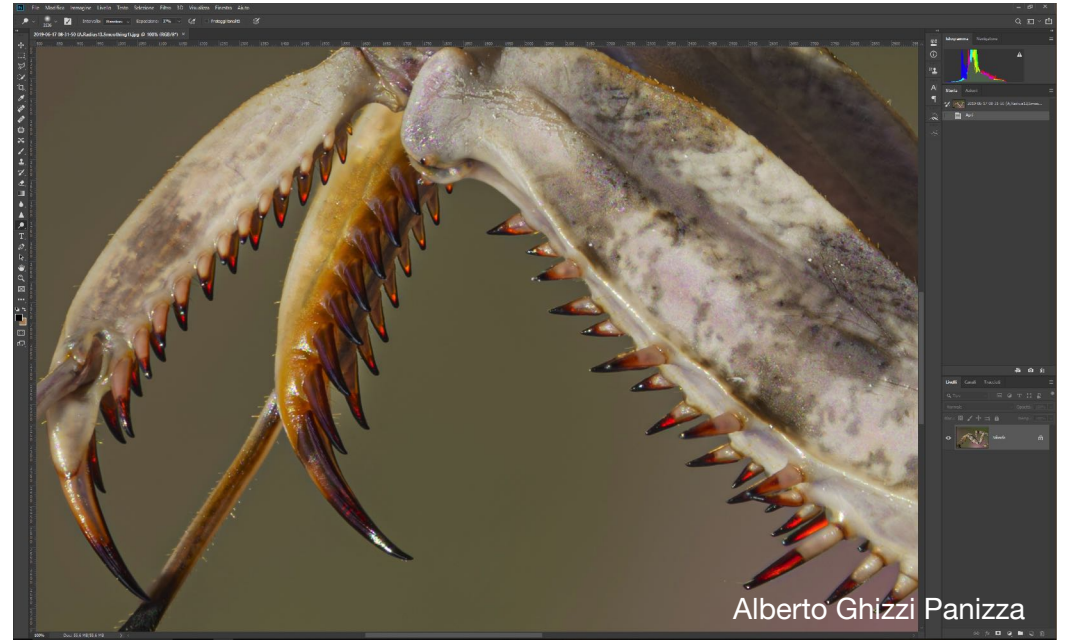

NiSi's Close-up lens is made of **double optical corrective glass** with an **apochromatic design**. It features a **multi-nano coating** to give advanced resolution and a natural color, with almost no purple/green fringing, both within focus and in bokeh.

► *What is close up lens*

The close-up lens is the most effective way to achieve a closer minimal focal distance. The magnification achieved depends on the focal range of the lens used, **It will be higher with longer focal lengths**. The magnification will be close to **1:1** when you focus at 200mm.

► *Focal length*

NiSi Close-up lens can make a telephoto lens function as a macro lens with a large working distance. We suggest using it with zoom or prime lenses in the focal length range of **70-300mm**.

▶ *Working Distance*

To use a close up lens it is important to know the maximum and minimum distances at which you can focus. The lens will only be able to take a properly focused image within that range.

The best working distance: 22-30cm.

▶ *Aperture*

We recommend using the close-up lens on telephoto lenses with an aperture of **f/8-f/16** to achieve the sharpest details.
